

Empowering Volleyball Coaches:

A Mobile Application
for Match-up Optimization

Understanding the challenge

Rotation Rule Complexity

- Players rotate through six zones clockwise, creating constantly changing match-ups during the game (Durkovic et al., 2007)

Dynamic Match-Ups

- 1 Line-up but 6 rotations, 6 different teams, 1 for each rotation according to Side-out effectiveness (Lopez et al. 2023), break-point effectiveness, and offensive/defensive abilities (Laios & Kountouris, 2010, 2011)
- Ongoing player movement results in complex and dynamic match-ups that require continuous strategic adjustments.

Coaching Cognitive Load

- Coaches face high cognitive demands, tracking rotations and player positioning under live game pressure.

Need for Technological Support

- Technological tools can reduce cognitive burden, helping coaches focus on strategic planning rather than manual tracking.

Understanding Line-up

Definition of Line-up

- Almost all teams in all competitive levels are using the 5-1 formation system, and so they have the same players, from the point of view of players' in-game roles (STR, OH1, MB2, OPP, OH2 and MB1), in the same order of rotation.
- Each in-game player/role is specialised in specific skills.
- Position Rotation (PR) is fully described by the setter's (STR) position.
- The initial Rotation of a set is called the Starting Rotation (SR).

Understanding Match-ups

Definition of Match-ups

Match-ups are specific player alignment combinations during volleyball rotations that influence game dynamics.

Types of Match-ups

There are six match-ups: M0, M-1, M-2, M#, M+2, and M+1, that denote different rotational alignments between teams.

Strategic Importance

Understanding match-ups helps coaches shift from reactive to proactive strategies by anticipating opponent moves.

M0	Same rotation with the opponent team (e.g.R1 vs R1)
M-1	One rotation prior to the opponent (e.g R1 vs R6)
M-2	Two rotations prior to the opponent (e.g R1 vs R5)
M#	Three rotations prior or ahead of the opponent (e.g., R1 vs R4)
M+2	Two rotations ahead of the opponent (e.g R1 vs R3)
M+1	One rotation ahead of the opponent (e.g R1 vs R6)

Other team with Reception						
STR in:						
	1	6	5	4	3	2
1	<u>M0</u>	<u>M-1</u>	<u>M-2</u>	<u>M#</u>	<u>M+2</u>	<u>M+1</u>
6	<u>M+1</u>	<u>M0</u>	<u>M-1</u>	<u>M-2</u>	<u>M#</u>	<u>M+2</u>
5	<u>M+2</u>	<u>M+1</u>	<u>M0</u>	<u>M-1</u>	<u>M-2</u>	<u>M#</u>
4	<u>M#</u>	<u>M+2</u>	<u>M+1</u>	<u>M0</u>	<u>M-1</u>	<u>M-2</u>
3	<u>M-2</u>	<u>M#</u>	<u>M+2</u>	<u>M+1</u>	<u>M0</u>	<u>M-1</u>
2	<u>M-1</u>	<u>M-2</u>	<u>M#</u>	<u>M+2</u>	<u>M+1</u>	<u>M0</u>

Other team with Serve						
STR in:						
	1	6	5	4	3	2
1	<u>M+1</u>	<u>M0</u>	<u>M-1</u>	<u>M-2</u>	<u>M#</u>	<u>M+2</u>
6	<u>M+2</u>	<u>M+1</u>	<u>M0</u>	<u>M-1</u>	<u>M-2</u>	<u>M#</u>
5	<u>M#</u>	<u>M+2</u>	<u>M+1</u>	<u>M0</u>	<u>M-1</u>	<u>M-2</u>
4	<u>M-2</u>	<u>M#</u>	<u>M+2</u>	<u>M+1</u>	<u>M0</u>	<u>M-1</u>
3	<u>M-1</u>	<u>M-2</u>	<u>M#</u>	<u>M+2</u>	<u>M+1</u>	<u>M0</u>
2	<u>M0</u>	<u>M-1</u>	<u>M-2</u>	<u>M#</u>	<u>M+2</u>	<u>M+1</u>

The Coach's Decision-Making Process

M-1

Match-up Analysis

Coaches analyze player match-ups to identify who should

- Block top attackers.
- Create or avoid of mismatch situations (hide the short player)
- Create favourable situations for serve (hard server vs best side-out rotation or safe server vs worst side-out rotation)

Strategic Rotation Selection

Selecting starting rotations locks in advantageous configurations for the entire set, maximizing team strengths.

Data-Driven Decisions

Utilizing data and real-time insights elevates coaching effectiveness beyond relying solely on player skill.

Our Solution: A Mobile Application

Project Overview

Introducing a mobile app designed to optimize volleyball match-up strategies for coaches.

Interdisciplinary Approach

Combines sports science and software engineering to enhance coaching decision-making.

Real-Time Match-Up Optimization

The app provides instant match-up analysis by tracking team and opponent rotations in real time.

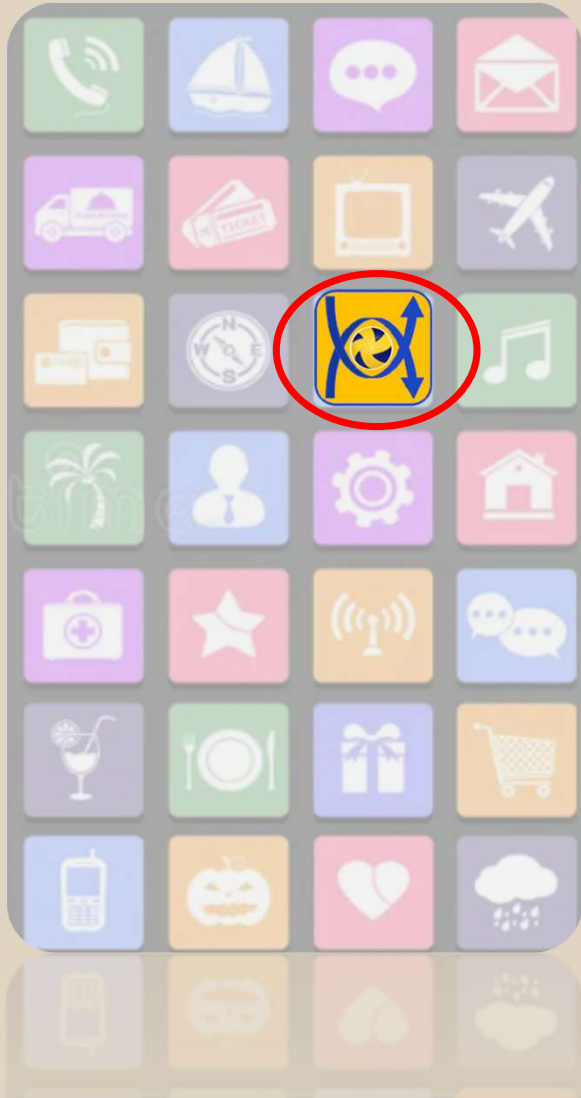

Pre-Game Analysis and Planning

Coaches can prepare strategies with detailed pre-game analysis and planning features within the app.

Enhanced Coaching Capabilities

This tool empowers coaches with data-driven insights, improving decision-making and adaptability in play. Aims to transform traditional coaching by providing real-time strategic support during games.

Technical Architecture

Progressive Web App Design

The app is designed as a PWA to function reliably in courtside environments with unstable internet connections.

Core Technology Stack

Angular, IndexedDB, and Capacitor provide modular structure, local storage, and cross-platform native deployment.

Key Architectural Advantages

Offline capability, cross-platform support, lightweight performance, and automatic updates enhance app reliability.

Reliability in Sports Setting

The architecture ensures the app remains functional and dependable during high-pressure coaching situations.

How it Works?

The screenshot shows the Match-up Epilysis interface. At the top, there is a header with a logo and the text "Match-up Epilysis". Below the header, there are two columns: "Serve" and "Setter in". Under "Serve", there are two rows: "OppTeam" (checked) and "My team" (unchecked). Under "Setter in", there are two rows: "1 6 5 4 3 2" and "1 6 5 4 3 2". Below these columns, there are six buttons labeled "M0", "M-1", "M-2", "M#", "M+2", and "M+1", each with an information icon. To the right of these buttons is a button labeled "GO Epilysis". Below the buttons, there is a large diagram of a match court. The court is divided into three horizontal sections. The top section is labeled "H1" and contains "Str" and "Lbr". The middle section contains "Opp", "Mb2", and "H2". The bottom section contains "Davi", "Paul", "John", "Mark", "Lbr", and "Sett". The court is bounded by "R6" at the top and "R1" at the bottom.

System Configuration and Operational Procedures Team Selection and Roster Management:

- **Select** the appropriate team designation. The system defaults to "Other Team" and "My Team".
- **Populate** the rosters by inputting player names or numbers. By default, the positions are labelled with their standard in-game roles.

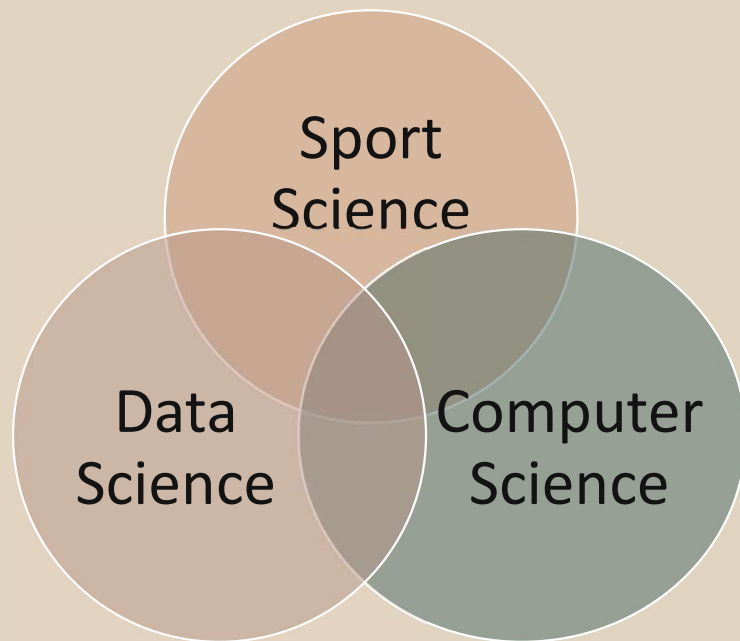

Initial Match Setup:

- **Designate** the initial serving team for the match.
- **Configure** the starting rotation for both teams.
- **Identify and tag** one key player on each team for specialized analysis.

Match Analysis and Live Tracking:

- **Review** the generated "Match-up Analysis" summary.
- **Access** the comprehensive view of the full rotational match-up.
 - The established starting rotation will be visually indicated by a red line.
- During the match, manually **select** and **update** the active rotational match-up as it changes.

Conclusion & Future Work

Future Enhancements

Planned upgrades include:

- Advanced analytics (Side-out and break point effectivity per rotation)
 - Simulation of the set (based on the i.i.d. assumption)
- Opponent strategy prediction by providing past match data per rotation
- Expanded iOS availability
- Cover other options of the game tactics (4 receivers or Rot1 new edition)

Key Achievements Summary

- The app provides real-time strategic insights, effectively solving critical volleyball coaching challenges.

Strategic Coaching Partner

- The application supports coaches in managing complex match-ups and enhancing strategic decision-making.
